

A Reliable, Sustainable and Cost-Effective Approach to Compliance

GDPR COMPLIANCE, AUTOMATED

Starting May 25, 2018, companies that collect personal data from European Union (EU) residents will be subject to penalties if they don't comply with General Data Protection Regulations (GDPR). Data controllers do not have to be based in the European Union to be subject to GDPR – these regulations govern any entity that captures personal data from EU residents, regardless of its location.

Get Compliant Quickly With Our Compliance Management Services and Proprietary iAgent for GDPR

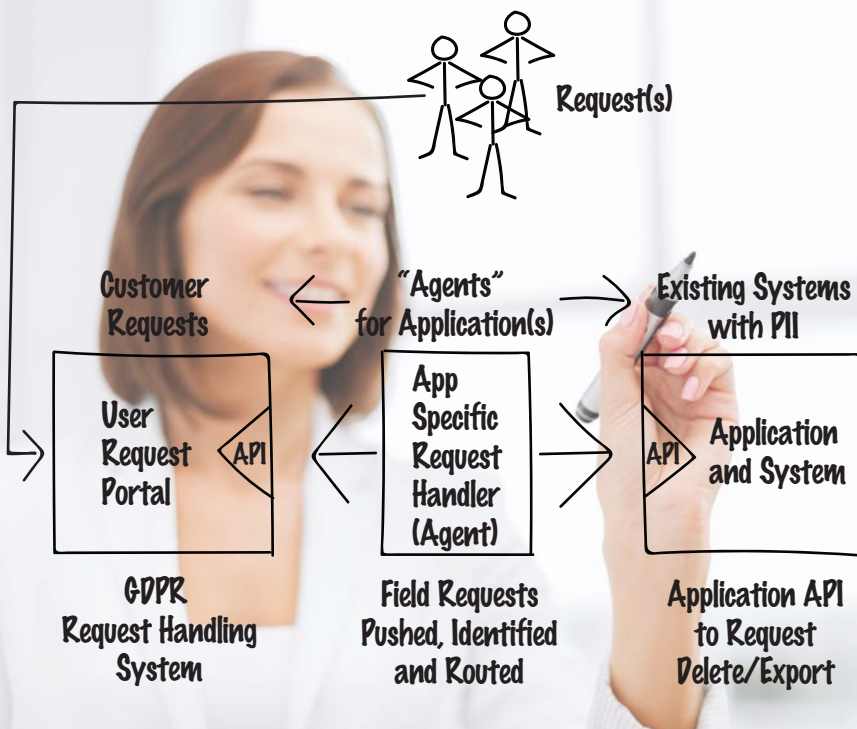

iTalent Digital is focused on delivering solutions for GDPR within the enterprise. Through our detailed yet agile compliance analysis coupled with an intelligent agent that we call iAgent for GDPR, we can automate the processing and routing of customer requests to delete or export personally identifiable information (PII).

GDPR noncompliance can incur penalties of fines of up to 4% of annual global revenue or 20 million euros – whichever is higher.

The solution is configured to support specific data security policy requirements for data and applications, as mandated by GDPR. iAgent for GDPR analyzes PII captured, as well as the GDPR requests received, and routes them to target systems and repositories, automatically triggering required actions to ensure compliance.

iTalent Digital delivers an assessment on what personal data exist within your application(s) or system(s), then customizes the iAgent for the specific scenario, delivering a PII data inventory, data typing, tagging and classification, as well as the configuration of tailored data- and application-specific policies.

The key is to ensure GDPR readiness across data services. PII tends to be stored and processed by a number of different applications and systems in different ways, and often across multiple repositories. iAgent for GDPR helps automate customer GDPR requests, allowing the intelligent processing and management of PII across the enterprise's applications and repositories

A Holistic Approach

PII permeates the organization; it is not confined to the system or application that initially captured the data. Rather, PII data find their way to other systems and reports through enterprise data integrations, so it is critical to understand the upstream and downstream paths of the PII data. Now with GDPR, a customer is expected to be able to make one request to delete or export personal data, and it is the responsibility of the data controller to retrace the path of data to delete or export.

Application Across Reporting Systems

PII data collected from a source system are often, if not always, passed to other systems and reporting platforms. It is the responsibility of the data controller to understand where the personal data reside, and if required to be deleted, they must be removed or anonymized.

About iTalent Digital | iTalent Digital is an innovative global woman- and minority-owned digital consulting and software engineering company headquartered in San Jose, California. We help companies achieve exceptional business outcomes through a suite of digital transformation services such as:

- Enterprise Collaboration
- Automated Mobile Solutions
- Business Insights and Analytics
- Artificial Intelligence
- Cloud Integration
- Change Management
- Compliance Management
- Unified Search

Our powerful solutions, combined with our diverse and effective team, make iTalent Digital the right fit for businesses that are looking to streamline operations and tap into real growth potential.
